

CV

Prof. Dr. Sava Vrbničanin, who has more than 30 years of experience in weed science, with more than 220 full scientific papers (60 in SCI journals), several books and chapters in national and international monographs. Her research focus is on weed flora and vegetation and alien invasive weeds, crop-weed interactions and population dynamics of weeds, weeds resistant to herbicides, critical time for weed control, physical weed control, integrated weed management, etc. She has supervised 11 PhD theses related different topics. She is supervisor of three ongoing thesis which is focused on content to this project (topics: 1) allelopathic characteristics of *Artemisia* species and its herbicidal potential; 2) Critical time weed control in cabbage; 3) Reactions of broadleaf weed species to floraspyrauxifen-benzyl). She was a leader of four national and two bilateral projects, and participated several national and international projects (bilateral, FP7, TEMPUS, ERASMUS, COST). Also, she is the editor-in-chief of the journal *Acta herbologica*, head of the department of pesticides and weed science. Citations 467, h-index 13 (Based on Scopus).
